

We're offering a limited number of spaces for our risk-free Telematics assurance programme.

Join our pilot programme today to gain full access to our Behaviour AI Platform so that you can reduce information over-load, uncover the context behind flagged incidents, and extract value from road-facing cameras – all of which helps eliminate unnecessary costs and improve driver training initiatives. Here's how it works:

PHASE 1

Launch & Data Collection

Project Launch & Planning

Meet our brilliant project delivery and engineering team - together with your product lead, we'll determine timelines and the measures of success.

Setup and Calibration

For a smooth experience, we'll calibrate our technology according to your camera parameters, including focal length, framerate, height, pitch and yaw.

Video Analysis

Using our powerful Behaviour AI Platform, we'll evaluate up to 1,000 of your offline harsh brake videos and extract only the most valuable insights.

PHASE 2

Evaluation & Value Creation

Review Insights & Results

HA will present the insights report, which can include details such as speed, velocity, trajectory and location; road user type, and frequency; and more.

Connected Evaluation

Now that we've demonstrated our value through offline video analysis, we'll now connect our API to your system so you can feed videos directly to us online.

Video Analysis through API

We'll replicate the success from our offline analysis with the connected API by providing valuable and usable insight, triggered automatically through the Cloud.

PHASE 3

Integration & Rollout

Review Pilot Results

Both of our teams will come together to review the Behaviour Insights reports across the first two phases to determine the Pilot's overall success.

Integration

We're confident we can reduce the number of your inaccurately flagged incident videos by at least 85%. We'd like to talk about a full integration.

Rollout

Whether it's a specific selection of your fleet or by location, we can work with you on a streamlined, high-impact and fast-scale rollout for speedy benefits.
